

# **Collagen Joint Complex**

Preserves Cartilage\*

Proven ingredients for strong, flexible, healthy joints

Helps you feel comfortable and mobile in your knees, hips, arms—and everywhere\*

#### You Will Feel the Difference

**Collagen Joint Complex** is a multi-nutrient powerhouse for an active life. This complete complex contains proven ingredients that support healthy, strong, flexible joints.\*

#### Advanced Joint Support\*

**Collagen Joint Complex** delivers five powerful nutrients that support cartilage and collagen—the "shock absorbers" of your knees, ankles, lower back, and hips—for strong, flexible joints.\*

 Type II Collagen has a distinct purpose—it makes up to 90 percent of the collagen in joint cartilage, so it is vitally important for joint structure and strength throughout the body. If you want to support healthy mobility, this highly absorbable form is a must.\*

- Glucosamine & Chondroitin are two effective building blocks for maintaining healthy joints. Even though you've probably heard of these two ingredients before, our combination delivers the two best forms—glucosamine hydrochloride and chondroitin sulfate—to maximize their potential for comfort and flexibility.\*
- Our Hyaluronic Acid Complex is clinically studied and shown to support joint comfort and mobility—you can rely on it to maintain an active lifestyle.\*
- The clinically studied Boswellia (Boswellia serrata)
  extract in Collagen Joint Complex is uniquely standardized
  to provide consistent levels of the plant's key compound,
  acetyl-11-keto-beta-boswellic acid, better known as
  AKBA. That helps it support critical pathways associated
  with joint comfort and flexibility that even other powerful
  herbs can't match.\* In fact, our boswellia delivers up to 10
  times more AKBA than you'll find in unstandardized forms.

### **Frequently Asked Questions for Collagen Joint Complex**

## Q. What is type II collagen?

A. Type II collagen occurs naturally in the body and is a major component of the cartilage in our joints, also called "articular cartilage." Supplemental type II collagen has been clinically studied for joint support, and is available from a number of sources.\* In this formula, the source of type II cartilage is poultry.

### Q. How is the boswellia in this formula different from other boswellia supplements?

A. Boswellia has a number of beneficial compounds, AKBA (acetyl-11-keto-beta-boswellic acid) being one of them. In fact, it supports pathways in the body that even other strong botanicals can't match. However, unstandardized boswellia can also contain undesirable beta-boswellic acid. This formula uses a unique boswellia that is standardized to at least 10% AKBA, and virtually no beta-boswellic acid, so you get the benefits you need—and none of the compounds you don't want.\*

### Q. Can I take this product if I am allergic to shrimp or other shellfish?

A. While the glucosamine in Collagen Joint Complex is sourced from shrimp, the shell component – chitin – is not associated with allergies because it does not contain protein from shrimp. However, please consult your allergy specialist if you have concerns or additional questions.

## What to Pair with Collagen Joint Complex

ArthoMed®	Supports joint health, plus flexibility and comfort.*
Curaphen*	Provides a combination of clinically studied curcumin blended with turmeric essential oil, boswellia, DLPA, and nattokinase for pain relief.* $^{*\dagger}$
