Healthy immune function*

Iodine is one of the most important minerals required by the body for healthy cellular and complete metabolic function. Breast tissue, the uterus, the ovaries, the thyroid, the brain and the prostate depend on iodine.* But typical intake levels for most people are not optimal.

Tri-Iodine contains three beneficial forms of iodine to nourish multiple body systems. Three forms are included because different tissues in the body prefer different forms. For example, your thyroid tissue absorbs iodine best as potassium iodide, while breast tissue takes up iodine in the form of molecular iodine. Additionally, there is evidence that using sodium iodide enhances absorption of the other forms.

Available in two strengths for flexible dosing:

6.25 mg total iodine (equivalent to 6,250 mcg) and **12.5 mg** total iodine (equivalent to 12,500 mcg) per capsule.

Frequently Asked Questions for Tri-Iodine®

Q. Isn't iodine supplementation just for preventing goiter?

A. Actually, only a small amount of iodine is really necessary for preventing goiter. But today, doctors have found that all tissues of the body require iodine. In addition to being essential to the thyroid, the breasts, ovaries, uterus, brain, and prostate tissue require large quantities of iodine. In the early 1900s Dr. Szent-Györgyi, the discoverer of vitamin C, was reported to have said that they did not know what iodine did in medical terms but it did everything good and was used for almost all health conditions. It is also reported that he himself ingested 1,000 mg a day of iodine.

Q. Why not just take one form of iodine?

A. Adding iodine to your regimen can certainly have benefits overall, but these three forms of iodine are more selective for different tissues. For instance, we include molecular iodine because of research that reviewed study results of breast health. It noted that while all forms tested (molecular iodine, sodium iodide and potassium iodide) produced beneficial effects, the best results for breast support were achieved with molecular iodine. However, in the case of thyroid health and the creation of thyroid hormones, sodium iodide and potassium iodide are the best form for support.*
